

Presentation M5 - ScholarLog

26.06.11 - Hofer Lukas - TINF2

Content

01 Problematics

02 Needs

03 My solution

04 Demonstration

05 Conclusion

06 Questions

Duration of presentation: 15 min (5 min questions)

01

Problematics

Average rating

What is my current average ?

How do I calculate my average ?

Did I calculate correctly ?

Results

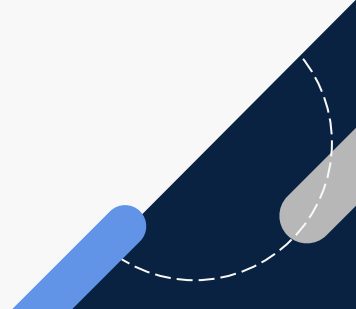

Where did I put my proof ?

Where should I record my results ?

Work logs

Where should I keep my work journal ?

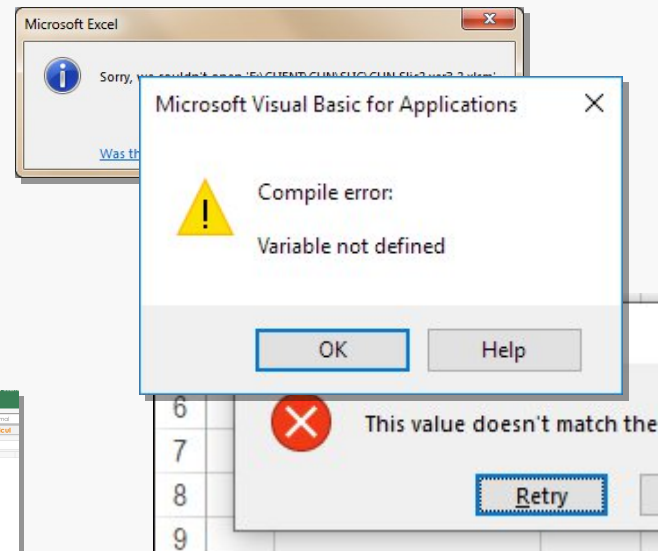

How much time did I spend on that task ?

Solutions ? (Excel)

[illegible]

Archiving not possible :
Not possible to put PDF

01

Problematics

Solutions ? (Cloud app)

Confidentiality :

You don't really own your own data

Internet only :

No access to your results or scans when offline

time consuming :

You build your own databases from scratch

02

Needs

What a student really need ?

Automatic Math

Instant, error-free weighted averages.

Stop wasting time calculating grades manually.

All-in-One Hub

Grades, PDF scans, and work journals unified in a single, perfectly organized place.

PDF Support

Link optimized PDF scans directly to the grades and study anywhere without heavy binders.

100% Privacy

Zero cloud dependency.

Your academic data stays completely safe on your local machine.

03

My solution

The ScholarLog Application

A Tailor-Made Tool

ScholarLog is an offline, all-in-one desktop application built specifically for EST students.

04

05

Conclusion

Why ScholarLog ?

Time saved

*Eliminates manual calculations
and chaotic excel sheets,*

*saving hours of administrative
work every module.*

GPLv3 Open Source

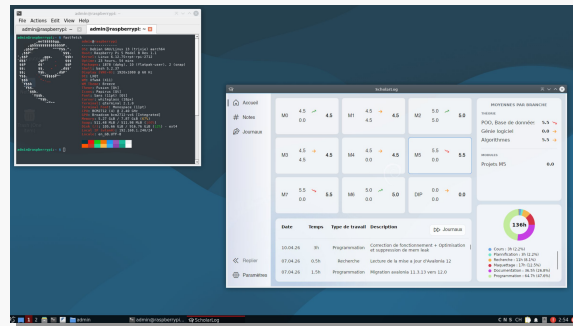

*A collaborative, transparent
tool.*

*Free forever, guaranteeing that
the code can evolve with future
student needs.*

Cross-Platform

*Fully automated deployment
scripts provide native,
optimized installers for
Windows, macOS, and Linux.*

Questions ?

**Thanks for your
attention !**
